## Market Overview

The views are those of SageView Advisory Group and should not be construed as investment advice. All information is believed to be from reliable sources; however, we make no representation as to its completeness or accuracy. All economic and performance information is historical and not indicative of future results. The market indices discussed are unmanaged. Investors cannot directly invest in unmanaged indices. Additional risks are associated with international investing, such as currency fluctuations, political and economic stability, and differences in accounting standards. Please consult your financial advisor for more information.

No representations or warranties are being made as to the tax effect, performance, past or future, or financial impact of this summary. This information is provided as an informal report; no warranties as to the accuracy or content are implied or expressed. The information above must be interpreted in the context of, and is qualified by, all the information contained in the prospectuses, where applicable, which have been or will be delivered to the appropriate investing parties prior to any offer being made.

# Markets March On: S&P 500 Resilience Through Global Turmoil

Over the past decade, the S&P 500 has navigated wars, invasions, terror attacks, trade conflicts, and a global pandemic.

While markets often react sharply in the moment, these events tend to have limited lasting impact on long-term performance. Investors who remained invested through global uncertainty were consistently rewarded for doing so.

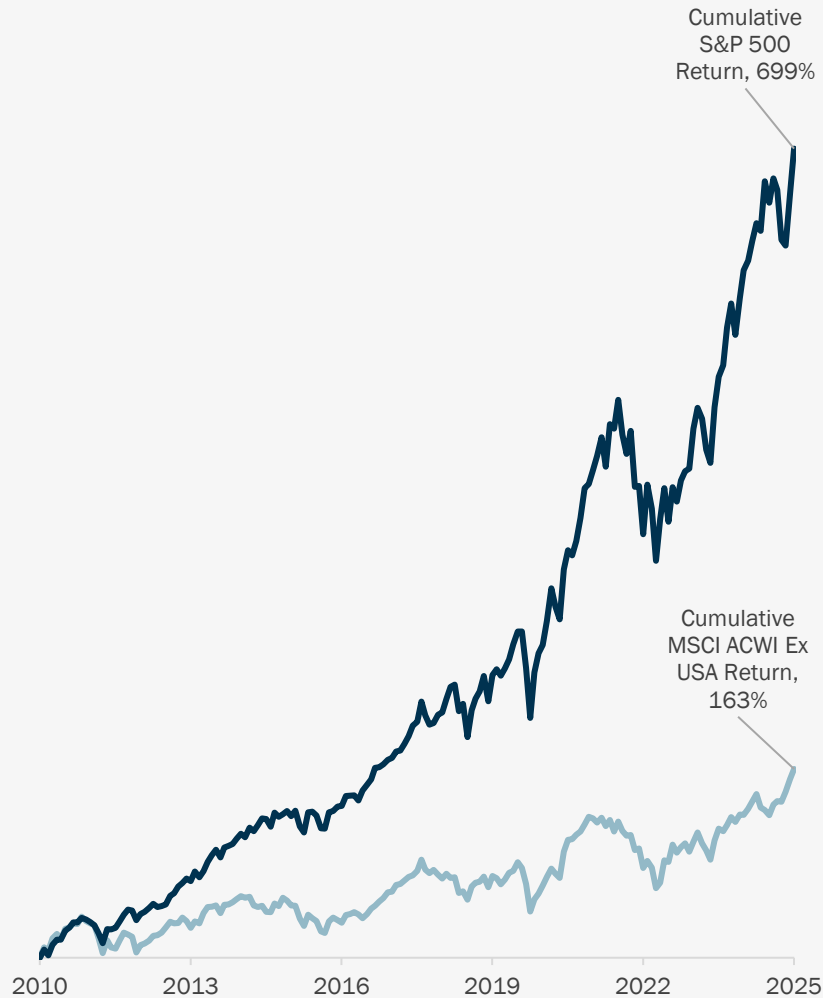

# Shifting Momentum: US vs. International Stocks

Over the past 15 years, US equities (particularly large-cap tech) have delivered extraordinary returns, significantly outpacing international. But so far in 2025, that trend has reversed, with international stocks staging a strong rebound. A weaker dollar, compelling valuations, and pockets of economic strength in Europe and Asia have all played a role.

While the performance gap remains substantial, this year's momentum shift reminds us that global diversification remains essential, especially after a decade-plus of US dominance that has left many portfolios heavily tilted toward domestic stocks.

### 15-Year Performance

### 2025 YTD Performance

# Q2 2025 By The Numbers

## Equity Rally

Early April's tariff announcements triggered elevated stock market volatility and large losses. At one point, the S&P 500 was down -15% YTD, one of the worst starts to the year in history. But by quarter end, the S&P was up over 6%, marking one of the biggest comebacks on record. The VIX, which measures market volatility, cratered 64% from its quarterly peak. Stronger-than-expected Q1 earnings, progress on trade negotiations, and continued excitement around AI served as tailwinds for stock prices.

**25**

Trading days for the S&P 500 to turn positive from its April 7 low

**78%**

Proportion of S&P 500 companies reporting EPS above estimates in Q1

**Aug 1**

Deadline for trade deals under postponed Liberation Day tariffs

## US Dollar Weakness

Rising policy uncertainty and growing fiscal deficits have weighed on investor confidence in US assets, contributing to the dollar's recent decline. In response, global central banks have accelerated diversification, shifting reserves into precious metals, alternative currencies, and even Bitcoin. Gold now accounts for 20% of global reserves, while fiat currencies collectively represent 80%. Meanwhile, the euro has gained more than 10% against the dollar, supported by substantial government stimulus.

**1973**

Last time DXY dropped more in H1: 1973 (-14.8% vs. -10.7% in 2025)

**57%**

USD share of global fiat currency reserve assets (70% in 1999)

**\$3,308**

Gold price per ounce as of 6/30 (+19.3% YTD)

## Fed Tensions

Lower inflation readings during the quarter eased concerns that tariffs might reignite structurally higher inflation. June's CPI reading of 2.7% showed little evidence of acceleration above the Fed's 2% target. Fed minutes revealed that half the committee now supports 50 basis points of cuts this year. Meanwhile, June's non-farm payrolls report from the BLS showed 147,000 jobs added, mostly in local government and healthcare, while May's JOLTS data reflected a modest uptick in job openings.

Commodities are represented by the Bloomberg Commodities Index; U.S. Real Estate by the FTSE NAREIT All REITs Index; U.S. Bonds by the Bloomberg U.S. Aggregate Index; U.S. Stocks by the S&P 500 Index; Developed International Stocks by the MSCI EAFE Index; and Emerging Markets Stocks by the MSCI EM Index.

# Equities

April's tariff announcements briefly pushed US stocks into a sharp but short-lived bear market. A strong rebound followed, driven by robust Q1 earnings, progress on trade negotiations, and easing inflation, which boosted expectations for rate cuts and supported valuations. Internationally, a weaker dollar, attractive valuations, and stimulus measures in Europe and Asia provided additional tailwinds. As a result, international stocks outperformed US stocks for the quarter, year-to-date, and over the trailing 12-month period.

### Equity Market Returns

# Investment Watch List Summary

Fund Name/% of Plan Assets/Category	Quantitative Watch List Date (Plan level)	Qualitative Watch List Date (Global level)	Watch List Comments	Recommendation
DFA Intermediate Govt Fixed-Income I 3.17 <i>Intermediate Government</i>	03/03/2023		The DFA Intermediate Govt Fixed-Income fund remains on quantitative watch for poor relative performance. Review SageView scoring page for additional information on performance.	Continue On Watch
Macquarie Mid Cap Growth CIT Class C 0.93 <i>Mid-Cap Growth</i>	06/30/2025		The Macquarie Mid Cap Growth fund remains on quantitative watch for poor relative performance. Review SageView scoring page for additional information on performance.	Replacement In Process
Victory Sycamore Small Company Opp I 0.85 <i>Small Value</i>	06/30/2025		The Victory Sycamore Small Company Opp fund remains on quantitative watch for poor relative performance. Review SageView scoring page for additional information on performance.	Place On Watch
T. Rowe Price Overseas Stock I 6.20 <i>Foreign Large Blend</i>	-	12/31/2024	Watch List (6/30/2025): Ray Mills, who has managed the T. Rowe Price Overseas Stock strategy for 17 years, will retire effective December 31, 2024. Mills has been the sole manager of the strategy since its launch in 2006. In preparation for his retirement, T. Rowe Price promoted Elias Chrysostomou to associate portfolio manager in the summer of 2023, and he was named co-portfolio manager alongside Mills in April 2024. Throughout the year, Mills retained veto rights over buy/sell decisions as Chrysostomou gradually assumed more leadership. Chrysostomou, who joined T. Rowe Price in 2019 and covered European and Canadian Financials, earned the promotion due to his strong work ethic and alignment with Mills' investment philosophy. While the investment process and philosophy are expected to remain consistent, it was noted that Mills tends to prioritize valuation, while Chrysostomou focuses more on quality in stock selection. Although Chrysostomou is considered a qualified successor, the transition is substantial enough to monitor.	Continue On Watch
Victory Pioneer Fundamental Gr R6 4.98 <i>Large Growth</i>	12/31/2024		The Victory Pioneer Fundamental Gr fund remains on quantitative watch for poor relative performance. Review SageView scoring page for additional information on performance.	Continue On Watch

Investing in mutual funds is subject to risk and loss of principal. There is no assurance or certainty that any investment strategy will be successful in meeting its objectives.

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. The prospectus contains this and other information about the funds. Contact your representative to obtain a prospectus, which should be read carefully before investing or sending money.

The target date of a target date fund may be a useful starting point in selecting a fund, but investors should not rely solely on the date when choosing a fund or deciding to remain invested in one. Investors should consider the fund's asset allocation over the whole life of the fund. Often, target date funds invest in other mutual funds, and fees maybe be charged by both the target date fund and the underlying mutual funds. A fund with higher costs must perform better than lower cost fund to generate the same net returns over time.

# Active Investment Options Analysis Criteria

All active plan investment options are reviewed quarterly against their peer group and index benchmark to determine the performance and quality of each offering. Each are evaluated using the following criteria:

1. Trailing 1, 3, 5 and 10 year returns – Total return is a basic measure of a fund's performance. Fund returns over each period are factored into a weighted average, based on the life of a fund. Recent returns receive a slightly higher weighting, while older returns, which may have been produced under different conditions, are weighted less.
2. Rolling period returns – A rolling period return divides a longer time frame into smaller time periods. A rolling 12-month return over five years is computed by first calculating a single period return over the first twelve months. Next, it calculates the 12-month return for months 2-13. The process continues until finally reaching the 12-month period spanning months 48-60. The final rolling figure reflects the average of all of the 12-month returns.
3. Batting Average – Batting average is calculated by (1) tallying the number of months in a given observation window where the investment return is greater than the return of the peer group median return and (2) dividing this amount by the total number of months in the observation window. The result is a ratio that ranges between 0 and 1. A batting average of greater than 0.50 signifies that the investment has outperformed the peer group more frequently than it has underperformed, irrespective of the magnitude of any outperformance or underperformance.
4. Style Consistency to the appropriate index – We utilize R-squared to assess whether the funds selected for the plan continue to operate and perform as expected within their appropriate asset class. R-squared measures the closeness between a fund's returns and movements in the benchmark. All active funds have some deviation from their benchmark, but excessive deviation could indicate that a fund is drifting away from its stated category mandate.
5. Modified Sharpe Ratio – The standard Sharpe Ratio calculation is calculated by subtracting the risk-free rate of return (the US Treasury Bill is typically used) from the portfolio return and dividing the result by the portfolio's standard deviation. A higher Sharpe ratio indicates that the portfolio was able to generate a higher return per unit of risk. Modified Sharpe Ratio is a related statistic that is equal to the Sharpe Ratio under normal circumstances. However, the Modified Sharpe calculation adds an exponent to the denominator that effectively raises the denominator to the -1 power in circumstances in which an investment's excess return is negative. This modification ensures that investments with both negative excess returns and higher standard deviations rank lower than investment with negative excess returns and lower standard deviations. Under the standard Sharpe Ratio calculation, the opposite is true.
6. Alpha – The use of Alpha allows us to gauge the effectiveness of the manager. Alpha is the difference between the portfolio's actual return and its expected return given the funds level of risk as calculated by beta.
7. Up Capture Ratio – The up capture ratio calculates the percentage of return of an index that a fund has captured during up market cycles. It tracks the fund's relative performance versus the appropriate index when the index is going up.
8. Down Capture Ratio – The down capture ratio calculates the percentage of return of an index a fund has captured during down market cycles. Funds that perform well in this category tend to reduce the downside loss for investors during bear markets.
9. Expense Ratio – The expense ratio is compared to the appropriate category average expense and then given a score based upon that percentage. This rewards low-cost funds and penalizes high-cost funds. Expense ratios are effectively "double weighted" in our scoring methodology, because performance returns are already net of expenses. Since fiduciaries are encouraged to carefully manage expenses, we believe explicitly factoring in fund fees is prudent.

Each fund is benchmarked to a specific market index, and fund performance is evaluated and compared to a relevant peer group using Morningstar category classifications. A fund is given a peer group ranking for each criterion, shown as a percentage. The percentage rankings for all criteria are then averaged to give a fund its average ranking score. All funds with at least a three year track record are scored in the above manner. A fund is then classified as Top Decile, top Quartile, 2nd Quartile, 3rd Quartile or 4<sup>th</sup> Quartile based upon the overall score compared to all other funds within that particular asset category.

# Passive Investment Options Analysis Criteria

All passive investment options are reviewed quarterly against their peer group and index benchmark to determine the performance and quality of each offering. Each are evaluated using the following criteria:

1. Expense Ratio – The percentage of fund assets, net of reimbursements, used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio. The Prospectus Net Expense Ratio is collected annually from a fund's prospectus.
2. Tracking Error – A measure of the difference in returns between an investment and a benchmark. Tracking error is reported as a standard deviation of the difference between the returns of an investment and its benchmark.
3. R-Squared – A statistical metric that ranges from zero to 100 and measures the percentage of portfolio's performance that is explained by the movement of its benchmark index. R-Squared is helpful in assessing the reliability of alpha and beta in explaining a portfolio risk and return characteristics. An r-squared of 100 would mean that the portfolio's performance movements are perfectly correlated with those of the benchmark over time, and would suggest that alpha and beta may be relied upon with a high degree of confidence.
4. Beta – A measure of the volatility, or systematic risk, of an investment in comparison to a market index as a whole. Beta is calculated using regression analysis. Beta represents the tendency of an investment's returns to respond to moves in the market or index that it's calculated against. A beta of 1 indicates that the investment's price moves with the market. A beta of less than 1 means that the investment is theoretically less volatile than the market. A beta of greater than 1 indicates that the investment's price is theoretically more volatile than the market. The reliability of an investment's beta is a function of the investment's r-squared value in relation to the benchmark. A high r-squared value signifies that the beta measure is reliable, while a low r-squared signifies that it is potentially inaccurate.

Each of the criteria above carries a proprietary weight. An index fund is evaluated and ranked in each of the above criteria relative to their peer group. A fund is given a peer group ranking for each criterion. The percentage rankings for all criteria are then weighted to give a fund its average ranking score.

The raw score is then normalized on a scale of 1 to 100, with 1 being the best and 100 the worst. The top 75% of the funds in a category receive a passing score, while the bottom 25% fail.

# Glossary of Terms

TERM	DEFINITION
Alpha	A risk-adjusted measure of performance that is equal to the difference between a portfolio's actual return and its expected performance given its level of risk as measured by beta. A positive alpha value indicates the portfolio has performed better than its beta would predict. In contrast, a negative alpha indicates the portfolio has underperformed given the expectations established by beta. Alpha can also be viewed as an abnormal level of return in excess of what might be predicted by an equilibrium pricing model like the Capital Asset Pricing Model (CAPM).
Annualized Return	Returns for periods longer than one year are expressed as "annualized returns." They represent an average amount of money earned by an investment each year during the specified time frame. When compounded over a certain period of time, they would produce a fund's total return.
Asset Class	A group of investments that has similar attributes. These attributes can be defined by their level of risk or return, or how they behave in the market. The three main asset classes are equities (stocks), fixed-income (bonds), and cash equivalents (money market instruments).
Batting Average	Batting average is calculated by (1) tallying the number of months in a given observation window where the investment return is greater than the return of the peer group median return and (2) dividing this amount by the total number of months in the observation window. The result is a ratio that ranges between 0 and 1. A batting average of greater than 0.50 signifies that the investment has outperformed the peer group more frequently than it has underperformed, irrespective of the magnitude of any outperformance or underperformance. A 10-year observation window is used in calculating batting average, unless the investment does not have sufficient performance history, in which case an inception-to-date figure is calculated.
Beta	A measure of the volatility, or systematic risk, of an investment in comparison to a market index as a whole. Beta is calculated using regression analysis. Beta represents the tendency of an investment's returns to respond to moves in the market or index that it's calculated against. A beta of 1 indicates that the investment's price moves with the market. A beta of less than 1 means that the investment is theoretically less volatile than the market. A beta of greater than 1 indicates that the investment's price is theoretically more volatile than the market. The reliability of an investment's beta is a function of the investment's r-squared value in relation to the benchmark. A high r-squared value signifies that the beta measure is reliable, while a low r-squared signifies that it is potentially inaccurate.
Benchmark	A standard against which the performance of a security, mutual fund or investment manager can be measured. Typically, a benchmark is a broad market index that groups many securities together in some systematic way.
Collective Investment Trust	A fund that is operated by a trust company or a bank and handles a pooled group of trust accounts. Collective investment funds (CITs) combine the assets of various individuals and organizations to create a larger, well-diversified portfolio. CITs are not regulated by the Investment Company Act of 1940 but are regulated by the Office of the Comptroller of the Currency ("OCC") and subject to oversight by the Internal Revenue Service ("IRS") and the Department of Labor ("DOL").
Down Capture Ratio	A ratio that measures the overall performance of a portfolio during falling markets. This measure analyzes how well a portfolio (or an investment manager) performed relative to its benchmark/index during periods when the benchmark fell. For example, a down-capture ratio of 95% (for a given period of time) means that the portfolio lost 5% less than its benchmark during the specified time period.
Expense Ratio	The percentage of fund assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio.
Growth Stock	Investors employing a growth investment strategy buy stocks of companies with a recent history of above average increases in earnings in anticipation that earnings growth will continue. Growth stocks are often characterized by high valuation ratios (e.g., high price-to-earnings ratios).

# Glossary of Terms

TERM	DEFINITION
Large Cap	Companies with a market capitalization value of more than \$10 billion.
Market Capitalization	Calculated by multiplying the number of a company's shares outstanding by its stock price per share.
Mid Cap	Companies with market capitalization value between \$2.5 (typically) and \$10 billion.
Modified Sharpe Ratio	The standard Sharpe Ratio calculation is calculated by subtracting the risk-free rate of return (the US Treasury Bill is typically used) from the portfolio return and dividing the result by the portfolio's standard deviation. A higher Sharpe ratio indicates that the portfolio was able to generate a higher return per unit of risk. Modified Sharpe Ratio is a related statistic that is equal to the Sharpe Ratio under normal circumstances. However, the Modified Sharpe calculation adds an exponent to the denominator that effectively raises the denominator to the -1 power in circumstances in which an investment's excess return is negative. This modification ensures that investments with both negative excess returns and higher standard deviations rank lower than investment with negative excess returns and lower standard deviations. Under the standard Sharpe Ratio calculation, the opposite is true.
Morningstar Category	A proprietary Morningstar data point that groups investment managers into categories based on the investment approach or strategy utilized by the investment manager. Categories help investors and investment professionals make comparisons between funds.
Moving Average	Measures the average price of a security over some specified period of time (e.g., 1 month, or 12 months). Then the subset of returns is modified by "shifting the time period forward"; that is, excluding the first number of the series and including the next number following the original subset in the series. This creates a new subset of numbers, which is averaged. This process is repeated over the entire data series or a specified time frame.
Mutual Fund	An investment company that continuously offers new equity shares in an actively managed portfolio of securities by pooling money from many investors. All owners in the fund share in the gains or losses of the fund. Shares of a mutual fund are redeemable on demand at fund's current Net Asset Value (NAV). Each mutual fund is managed to a particular objective that is stated in the fund's prospectus.
Net Asset Value (NAV)	A mutual fund share's value, calculated once per day, based on the closing market price of each security in the fund's portfolio. It is calculated by deducting the fund's liabilities from the total assets and dividing this net asset amount by the number of share's outstanding.
Rolling Return	Measures the return of an investment over some specified period of time (e.g., 1 year, or 3 years) and repeats the calculation over a stated time frame. A rolling period return divides a longer time frame into smaller time periods. For example, a rolling 12-month return over 3 years starts by calculating a single period return over the first twelve months. Then, the subset of returns is modified by rolling the data forward by excluding the first number (first month in this case) and including the next number (month 13) in the data series. This process continues over a stated time frame (3 years in this example).
R-Squared	A statistical metric that measures the fraction of variation in the movement of one variable in relation to another variable. In the case of a mutual fund, R-squared measures the percentage of the mutual fund's performance that is explained by the movement of its benchmark. The metric ranges from 0 to 100. An R-squared of 100 means that all of the portfolio's performance is completely explained by the movements of a benchmark over a calculated time period. A high R-squared (between 85 and 100) indicates the fund's performance patterns have been in line with the index. A lower number would mean that the fund behaves much differently from the index.
Standard Deviation	A statistical measure of dispersion or variation from the average. A high standard deviation for an investment means the historical range of performance was wide, implying greater volatility.
Total Return	Measures the performance of an investment over a given period, including income from dividends and interest, plus any appreciation or depreciation in the market value (or price) of an investment.

# Glossary of Terms

TERM	DEFINITION
Tracking Error	A measure of the difference in returns between an investment and a benchmark. Tracking error is reported as a standard deviation of the difference between the returns of an investment and its benchmark.
Turnover Ratio	Measures the percentage of a mutual fund's holdings that have been "turned over" or replaced with other holdings in a given year. This ratio includes all trading activity even if a holding wasn't fully replaced by another holding.
Up Capture Ratio	A ratio that measures the overall performance of a portfolio during rising markets. This measure analyzes how well a portfolio (or an investment manager) performed relative to its benchmark/index during periods when the benchmark rose. For example, an up-capture ratio of 108% (for a given period of time) means that the portfolio gained 8% more than its benchmark during the specified time period.
Value Stock	Investors employing a value investment strategy buy stocks of companies they believe are underpriced based on some fundamental valuation metrics (e.g., low price-to-earnings ratios), in anticipation that the price performance of the stock will reverse.

# Glossary of Benchmarks

INVESTMENT OPTION CATEGORY	BENCHMARK	BENCHMARK/INDEX DEFINITION
<b>CAPITAL PRESERVATION</b>		
Money Market	3-Month Treasury Bill	Three-month T-bills are government-backed, short-term investments considered to be representative of a risk-free investment.
Stable Value / Guaranteed Account	3-Month Treasury Bill	Three-month T-bills are government-backed, short-term investments considered to be representative of a risk-free investment.
<b>BOND</b>		
Ultrashort Bond / Short-Term Bond	Bloomberg U.S. Gov't/Credit 1-3 Year TR	Unmanaged index which is a component of the U.S. Government/Credit Bond Index, which includes Treasury and agency securities (U.S. Government Bond Index) and publicly issued U.S. corporate and foreign debentures and secured notes (U.S. Credit Bond Index). The bonds in the index are investment grade with a maturity between one and three years.
Short Government Bond	Bloomberg Government 1-5 Year TR Index	This index includes all medium and larger issues of U.S. government, investment-grade corporate, and investment-grade international dollar-denominated bonds that have maturities of between 1 and 5 years and are publicly issued.
Intermediate Government Bond	Bloomberg U.S. Gov't/Mortgage TR Index	The index measures the performance of U.S. government bonds and mortgage-related securities.
Intermediate-Term Bond	Bloomberg U.S. Aggregate Bond TR Index	Represents securities that are SEC-registered, taxable and dollar denominated. The index covers the U.S. investment grade fixed rate bond market with index components for government and corporate securities, mortgage pass-through securities and asset-backed securities. All returns are market value weighted inclusive of accrued interest.
Long Government Bond	Bloomberg U.S. Government Long TR Index	Unmanaged index that includes all publicly issued U.S. Treasury securities that have a remaining maturity of 10 or more years, are rated investment grade, and have \$250 million or more of outstanding face value/
Long Term Bond	Bloomberg U.S. Long Government/Credit TR Index	This index includes all medium and larger issues of U.S. government, investment-grade corporate, and investment-grade international dollar-denominated bonds that have maturities of greater than 10 years and are publicly issued.
Inflation-Protected Bond	Bloomberg U.S. Treasury Inflation Protected Securities (TIPS) TR Index	Consists of U.S. Treasury Inflation-Protection Securities that have at least a year left to maturity and are non-convertible, rated investment grade of at least BBB by S&P or Baa3 by Moody's, fixed rate, and have more than \$250 million par value outstanding.
Corporate Bond	Bloomberg U.S. Credit TR Index	This index represents publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements. To qualify, bonds must be SEC-registered. The index includes both corporate and non-corporate sectors. The corporate sectors are Industrial, Utility, and Finance, which include both U.S. and non-U.S. corporations. The non-corporate sectors are Sovereign, Supranational, Foreign Agency, and Foreign Local Government.
Multi-sector Bond	Bloomberg U.S. Aggregate Bond TR Index	Represents securities that are SEC-registered, taxable and dollar denominated. The index covers the U.S. investment grade fixed rate bond market with index components for government and corporate securities, mortgage pass-through securities and asset-backed securities. All returns are market value weighted inclusive of accrued interest.

# Glossary of Benchmarks

INVESTMENT OPTION CATEGORY	BENCHMARK	BENCHMARK/INDEX DEFINITION
<b>BOND</b>		
High Yield Bond	Bloomberg U.S. HY 2% Issuer Cap TR Index	The index measures the performance of high yield corporate bonds, with a maximum allocation of 2% to any one issuer.
Bank Loan	Credit Suisse Leveraged Loan TR Index	The index represents tradable, senior-secured, U.S.-dollar-denominated non-investment-grade loans.
World Bond	Bloomberg Global Aggregate TR Index	Provides a broad-based measure of global investment grade debt markets; it includes the U.S. Aggregate Index, Pan-European Aggregate Index and Asian-Pacific Aggregate Index. It also contains a wide variety of customized sub-indices.
World Bond-USD Hedged	Bloomberg Global Aggregate TR Hdg USD	Provides a broad-based measure of global investment grade debt markets; it includes the U.S. Aggregate Index, Pan-European Aggregate Index and Asian-Pacific Aggregate Index. It also contains a wide variety of customized sub-indices.
Emerging Markets Bond	JPM EMBI Global Diversified TR Index	The J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) currently covers 27 emerging market countries. Included in the EMBI Global are U.S.-dollar-denominated Brady bonds, Eurobonds, traded loans, and local market debt instruments issued by sovereign and quasi-sovereign entities.
Emerging-Markets Local-Currency Bond	JPM GBI-EM Global Diversified TR USD	The J.P. Morgan Government Bond Index - Emerging Markets Diversified index covers 18 emerging market economies. Included in the GBI EM are fixed rate, investment grade local currency debt securities, regularly traded, liquid fixed rate, domestic currency government bond. GBI EM Global consists of treasury securities from emerging markets and is diversified weighted.
Nontraditional Bond	Wilshire Liquid Alternative Index	Designed to provide a broad measure of the liquid alternative market by combining the performance of the Wilshire Liquid Alternative Equity Hedge Index, Wilshire Liquid Alternative Global Macro Index, Wilshire Liquid Alternative Relative Value Index, Wilshire Liquid Alternative Multi-Strategy Index, and Wilshire Liquid Alternative Event Driven Index.
<b>U.S. LARGE CAP EQUITIES</b>		
Large Cap Value	Russell 1000 Value Index	Measures the performance of the large-cap value segment of the U.S. equity universe. It is a market-capitalization weighted index of those firms in the Russell 1,000 with lower price-to-book ratios and lower forecasted growth values.
Large Cap Blend	Russell 1000 Index	Measures the performance of the large-cap segment of the U.S. equity universe. It is a subset of the Russell 3000 Index and includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000 represents approximately 92% of the U.S. market.
Large Cap Blend	Russell 3000 Index	Measures the performance of the largest 3,000 U.S. companies representing approximately 98% of the investable U.S. equity market.
Large Cap Blend	S&P 500 Index	Measures the performance of 500 leading large-capitalization companies in the U.S. and captures approximately 80% of the available U.S. market capitalization. Companies must have a market cap of \$5.3 billion and have positive earnings over the most recent quarter and trailing four quarters. The index does not overlap holdings with the S&P MidCap 400 or S&P 600 SmallCap Indexes.

# Glossary of Benchmarks

INVESTMENT OPTION CATEGORY	BENCHMARK	BENCHMARK/INDEX DEFINITION
<b>U.S. LARGE CAP EQUITIES</b>		
Large Cap Blend	CRSP U.S. Total Market Index	Comprised of 4,000 constituents from mega, large, small and micro capitalizations, representing nearly 100% of the investable U.S. equity market. CRSP stands for Center for Research in Security Prices and was founded in 1960 to help develop a definitive measurement of long-run market returns.
Large Cap Growth	Russell 1000 Growth Index	Measures the performance of the large-cap growth segment of the U.S. equity universe. It is a market-capitalization weighted index of those firms in the Russell 1000 with higher price-to-book ratios and higher forecasted growth values.
<b>U.S. MID CAP EQUITIES</b>		
Mid-Cap Value	Russell Mid Cap Value Index	Measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Midcap Index companies with lower price-to-book ratios and lower forecasted growth values.
Mid-Cap Blend	Russell Midcap Index	Measures the performance of the mid-cap segment of the U.S. equity universe. It is a subset of the Russell 1000 Index and includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership.
Mid-Cap Blend	S&P 400 MidCap Index	Measures the performance of 400 mid-sized companies of the U.S. equity market based on their market capitalization. Companies must have an unadjusted market cap of \$1.4 billion to \$5.9 billion and have positive earnings over the most recent quarter and trailing four quarters. The index does not overlap holdings with the S&P 500 or S&P SmallCap 600 Indexes.
Mid-Cap Blend	MSCI U.S. Mid Cap 450 Index	Consists of the next largest 450 companies of the U.S. equity market and measures the performance of the mid cap segment.
Mid Cap Blend	CRSP U.S. Mid Cap Index	Includes U.S. companies that fall between the top 70% to 85% of investable market capitalization, representing a broad mix of U.S. mid-size companies.
Mid Cap Blend	S&P Completion Index	Comprises all members of the S&P Total Market Index except for the current constituents of the S&P 500. The index covers approximately 3000 constituents, offering investors broad exposure to mid, small, and microcap companies.
Mid Cap Blend	Dow Jones U.S. Completion Total Stock Market Index	A sub-index of the Dow Jones U.S. Total Stock Market Index that excludes components of the S&P 500. The Dow Jones U.S. Total Stock Market Index is a market-weighted index that includes about 3,650 large, mid, small and micro-cap companies that trade on U.S. stock exchanges.
Mid-Cap Growth	Russell Midcap Growth Index	Measures the performance of the mid-cap growth segment of the U.S. equity universe. It includes those Russell Midcap Index companies with higher price-to-book ratios and higher forecasted growth values.

# Glossary of Benchmarks

INVESTMENT OPTION CATEGORY	BENCHMARK	BENCHMARK/INDEX DEFINITION
<b>U.S. SMALL CAP EQUITIES</b>		
Small Cap Value	Russell 2000 Value Index	Measures the performance of the small-cap value segment of the U.S. equity universe. It is a market-weighted total return index that measures the performance of companies within the Russell 2000 having lower price-to-book ratios and lower forecasted growth values.
Small Cap Blend	Russell 2000 Index	Measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000 Index is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership.
Small Cap Blend	S&P SmallCap 600 Index	Measures the performance of 600 small-cap companies of the U.S. equity market based on their market capitalization. Companies must have an unadjusted market cap of \$400 million to \$1.8 billion and have positive earnings over the most recent quarter and trailing four quarters. The index does not overlap holdings with the S&P 500 or S&P MidCap 400 Indexes.
Small Cap Blend	MSCI U.S. Small Cap 1750 Index	Consists of the smallest 1,750 companies in the U.S. Investable Market 2500 Index of the U.S. equity market. It measures the performances of the small cap segment.
Small Cap Blend	CRSP U.S. Small Cap Index	Includes U.S. companies that fall between the bottom 2% to 15% of the investable market capitalization.
Small Cap Growth	Russell 2000 Growth Index	Measures the performance of the small-cap growth segment of the U.S. equity universe. It is a market-weighted total return index that measures the performance of companies within the Russell 2000 having higher price-to-book ratios and higher forecasted growth values.
<b>WORLD STOCK</b>		
World Large-Stock Blend	MSCI ACWI NR	A free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The MSCI ACWI consists of 46 country indexes comprising 23 developed and 23 emerging market country indexes.
World Large-Stock Growth	MSCI ACWI Growth NR USD	The index captures large and mid cap securities across 23 Developed Markets (DM) countries and 25 Emerging Markets (EM) countries. There are five variables used: long term forward EPS growth rate, short-term forward EPS growth rate, current internal growth rate and long-term historical EPS growth trend and long-term historical sales per share growth trend.
World Large-Stock Value	MSCI ACWI Value NR USD	The index captures large and mid cap securities across 23 Developed Markets (DM) countries and 25 Emerging Markets (EM) countries. Investment style characteristics are defined using three variables: book value to price, 12 month forward earning to price and dividend yield.
World Small/Mid stock	MSCI ACWI SMID NR USD	The index captures mid and small cap across 23 Developed Markets (DM) and 25 Emerging Markets (EM) countries. With 7,858 constituents, the index covers approximately 28% of the free float-adjusted market capitalization in each country.

# Glossary of Benchmarks

INVESTMENT OPTION CATEGORY	BENCHMARK	BENCHMARK/INDEX DEFINITION
<b>INTERNATIONAL EQUITIES</b>		
Foreign Large Value	MSCI ACWI ex U.S. Value NR Index	Consists of large and mid cap securities that display overall value style characteristics across 22 Developed and 24 Emerging Market countries. Value style characteristics are defined by book value to price, 12-month forward earnings to price and dividend yield.
Foreign Large Blend	MSCI ACWI ex U.S. NR Index	Consists of large and mid cap securities across 22 of 23 Developed Markets (DM) countries (excluding the U.S.) and 24 Emerging Market (EM) countries. With over 2,100 constituents, the index covers approximately 85% of the global equity opportunity set outside the U.S.
Foreign Large Growth	MSCI ACWI ex U.S. Growth NR Index	Consists of large and mid cap securities that have overall growth style characteristics across 22 Developed Market countries and 24 Emerging Market countries. The growth investment style characteristics are defined by long-term forward EPS growth rate, short-term forward EPS growth rate, current internal growth rate, long-term historical growth trend and long-term historical sales per share growth trend.
Foreign Small/Mid Value	MSCI ACWI ex U.S. SMID Value NR	The index captures mid and small cap representation across 22 of 23 Developed Market (DM) countries (excluding the U.S.) and 23 Emerging Markets countries. With 5,293 constituents, the index covers approximately 28% of the free float-adjusted market capitalization in each country.
Foreign Small/Mid Blend	MSCI ACWI ex U.S. SMID NR	The index captures mid and small cap representation across 22 of 23 Developed Market (DM) countries (excluding the U.S.) and 23 Emerging Markets countries. With 5,293 constituents, the index covers approximately 28% of the free float-adjusted market capitalization in each country.
Foreign Small/Mid Growth	MSCI ACWI ex U.S. SMID Growth NR	Consists of small cap securities across 22 of 23 Developed Markets countries (excluding the U.S.) and 23 Emerging Markets countries. It covers approximately 14% of global equity opportunity set outside of the U.S.
Diversified Emerging Markets	MSCI Emerging Markets NR Index	Consists of large, mid and small cap securities across 23 Emerging Markets countries. The index covers approximately 99% of the free float-adjusted market capitalization in each country.
<b>TARGET DATE</b>		
Target Date	S&P Target Date Indexes	Consist of eleven multi-asset class indices, each corresponding to a specific target retirement date. Each target date index is designed to represent a broadly derived consensus of asset class exposure for each target date year, as well as an overall glide path. Each index corresponds to a particular target retirement date, providing varying levels of exposure to equities, bonds and other asset classes. The asset allocation for each index is based on market observations through an annual survey of target date fund managers. Each index is created and retired as determined by the target date fund survey.
<b>RISK-BASED / HYBRID</b>

# Morningstar ESG Definitions

TERM	DEFINITION
Breakdown of ESG Scores – Percent of AUM	Sustainalytics measures the degree to which a company’s economic (enterprise) value is at risk driven by ESG factors or the magnitude of a company’s unmanaged ESG risks. 67% of assets in the portfolio holdings must be identified to receive a rating. Based on the Unmanaged Risk scores, corporate entities are assigned to one of five ESG risk categories: Negligible, Low, Medium, High and Severe.
Breakdown of ESG Scores – Percent of AUM with Negligible ESG Risk Scores	ESG Risk Score ESG Risk Classification: 0-10 Negligible, 10-20 Low, 20-30 Medium, 30-40 High, 40+ Severe
Breakdown of ESG Scores – Percent of AUM with Low ESG Risk Scores	ESG Risk Score ESG Risk Classification: 0-10 Negligible, 10-20 Low, 20-30 Medium, 30-40 High, 40+ Severe
Breakdown of ESG Scores – Percent of AUM with Medium Risk Scores	ESG Risk Score ESG Risk Classification: 0-10 Negligible, 10-20 Low, 20-30 Medium, 30-40 High, 40+ Severe
Breakdown of ESG Scores – Percent of AUM with High ESG Risk Scores	ESG Risk Score ESG Risk Classification: 0-10 Negligible, 10-20 Low, 20-30 Medium, 30-40 High, 40+ Severe
Breakdown of ESG Scores – Percent of AUM with Severe ESG Risk Scores	ESG Risk Score ESG Risk Classification: 0-10 Negligible, 10-20 Low, 20-30 Medium, 30-40 High, 40+ Severe
Historical Sustainability Risk in Global Category	The Morningstar Historical Portfolio Sustainability Score is a weighted average of the trailing 12 months of Morningstar Portfolio Sustainability Scores. Historical portfolio scores are not equal-weighted; rather, more-recent portfolios are weighted more heavily than more-distant portfolios.
Breakdown of Carbon Risk	The Morningstar portfolio Carbon Risk Score is the asset-weighted Sustainalytics carbon-risk rating of companies held in a portfolio. It evaluates how much unmanaged carbon risk remains for a company after accounting for its management activities that mitigate overall carbon exposure. The carbon risk rating is based on assessments across two dimensions: exposure and management. Exposure is a measure of degree to which carbon risks are material across the entire value chain, in a firm’s supply chain, its own operations, products and services. Management is quality of management approach to reduce emissions and related carbon risk. Company unmanaged risk scores range from low to high (lower is better) starting from zero and are sorted into five risk categories: Severe, High, Medium, Low and Negligible
Breakdown of Carbon Risk – Percent of AUM with Severe Carbon Risk	Risk score of 50+.
Breakdown of Carbon Risk – Percent of AUM with High Carbon Risk	Risk score of 30-49.9
Breakdown of Carbon Risk – Percent of AUM with Medium Carbon Risk	Risk score of 10-29.9
Breakdown of Carbon Risk – Percent of AUM with Low Carbon Risk	Risk score of 0.1-9.99
Breakdown of Carbon Risk – Percent of AUM with Negligible Carbon Risk	Carbon risk score of 0

# Morningstar ESG Definitions

TERM	DEFINITION
Product Involvement %	Sustainalytics presents product involvement at the company level as a range of revenue exposure for all product areas except for Abortive/Contraceptives/Stem Cell, Animal Testing and Controversial Weapons. For these three product areas, company involvement is a binary, either yes or no. For all other product areas, the company revenue exposure ranges are None, 0.1-4.9%, 5-9.9%, 10-24.9%, 25-49.9% and 50-100%. Morningstar established a minimum involvement threshold. For each product area, the holdings that meet the minimum involvement threshold are summed by their weight in the portfolio. The sum represents the portfolio's asset weighted exposure to the product involvement area.
Product Involvement % - Abortive/Contraceptive/Stem Cell	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in the manufacturing of drugs that have abortifacient properties or contraceptives, or the use of human embryonic stem cells, fetal cell lines for vaccines or biological development; indirectly by owning acute care hospitals or surgical centers related to abortion or contraceptive procedures or developing technologies that enable human embryonic stem cell research. Minimum revenue threshold is binary – yes/no.
Product Involvement % - Adult Entertainment	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in the production of adult entertainment and/or owns/operates adult entertainment establishments including movies, television, magazines and adult websites; indirectly by distributing adult entertainment materials. The minimum revenue threshold to mark a company as involved is 50%.
Product Involvement % - Alcohol	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in the manufacturing of alcoholic beverages; indirectly involved by supplying of alcohol related product/services to alcoholic beverage manufacturers, including specialized equipment or raw materials to produce alcohol. The company derives revenue from distribution and/or retail sale of alcoholic beverages. The minimum revenue thresholds to mark a company as involved are the following ranges: manufacturing: 5-9.9%; Supplier 50-100% and Distribution 25-49.9%
Product Involvement % - Animal Testing	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in animal testing for pharmaceutical products, medical devices, biotechnology or non-pharmaceutical products. Minimum revenue threshold is binary – yes/no.
Product Involvement % - Controversial Weapons	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in the core weapon system that are considered tailor-made and essential for the lethal use of the weapon; indirectly by providing components/services for the core weapon system, which are either not considered tailor-made or not essential to the lethal use of the weapon. Minimum revenue threshold is binary – yes/no
Product Involvement % - Fur & Specialty Leather	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in manufacturing products made from fur or specialty leather, including products made from animals solely hunted or bred for their skin and fur; indirectly by deriving 10% or more of revenue from the distribution or retail sale of such products. The minimum revenue thresholds to mark a company as involved are the following ranges: Production: 50-100%; Revenues: 25- 49.9%.
Product Involvement % - Gambling	The percent of a fund's assets under management that is invested in companies that are classified as directly involved by owning or operating gambling establishment(s) such as a casino, racetrack or online gambling; indirectly by providing supporting products/services to gambling operations. Manufacturing specialized equipment used for gambling, including slot machines, roulette wheels, and lottery terminals. The minimum revenue threshold to mark a company as involved is 5-9.9%.
Product Involvement % - GMO	The percent of a fund's assets under management that is invested in companies that are classified as directly involved in growing genetically modified crops; indirectly involved in the development or cultivation of genetically modified seeds or plants. The minimum revenue thresholds to mark a company as involved are the following ranges: Growth: 0.1-4.9%; Development: 5-9.9%.
